# System Health Check App

This is a sample application that I'm developing primarily to help myself and others learn to use Ember.js. It also uses node-webkit and the Ember Addon Bootstrap for Ember. Feel free to improve it or at least share feedback.

## Prerequisites:

- Install `node.js`
- Install `grunt`
- (optional) Install `node-webkit` and add `nw` to path

## Quick start

1. `npm install` (load dependencies)
2. `grunt` (run default task, which builds everything from scratch)
3. Execute the binary in `dist/[your OS]` (or run `nw dist`)
